Re-Application No. 10/633,359

Filed: 08 04 2003

Art Unit 3653

7590 02/16/2006

(May 26 2011)

Renewed Petition under 37 CFR 1. 137(a)

ATTENTION: Andrea Smith,

Dear Andrea,

"I hereby request an as-of-right extension to the most recent report under 37 CFR 1. 137(a)" I have been terminally ill since 2003 became increasingly worse in 2005 requiring Splenectomy surgery January 27th 2005 at Mc Master Hospital Hospital in Hamilton Ontario, (6.5 lbs tumour removed including Spleen, Pancreas, some small Intestine) many complications along the way to recovery. I went through very stressful, difficult times of suffering, confusion and depression. I was treated for my Symptoms during that time period. I had Surgery again in June 2006 for Prostate Cancer, many complications along the way to recovery as well.

My finances were depleted; and because of my failing health and frame of mind at the time I was not able to fully comprehend the severity of not attending to this matter expeditiously. Please keep in mind as well; that I hired the services of a Lawyer (Anthony Asquith) on April 7th 2006, his advised was: "I should not maintain my Canadian application and that I should leave everything to him where my US application was concerned. I terminated his services September 16th 2008, I felt that I was under-represented. I did not want to disclose my psychological conditions but I feel they will provide the help necessary for this case.

The difficulty I'm having is: My application #10/633,359 was abandon in Feb. 16th 2006, yet my agent was assigned US application #0606923.1 April 6th 2006, and again April 6 2007, for the same invention. How so? Since I have previously submitted: Petition documents to make special based on age for advancement of examination under 37 CFR 1.102(c)(1) also petition for revival of an application for patent abandoned unintentionally under 37 CFR 1. 137(b). Hope I have met the burden placed upon me, and you can now expedite the application to grant. Enclosed please find medical records.

Re: Allen, Wellesley Alexander
DOB: [redacted]

Dear Dr. Pierre Kugler:

Thank you for referring Wellesley Alexander Allen to me.

Les is a 64 year-old male with a chronic history of bilateral otalgia. Over the last 3 months, it has worsened and the left side is worse than the right. He finds that stress increases the pain. Indeed, he has been under increased stress as he was diagnosed with prostate Ca. He also finds that chewing worsens the pain. There are no associated otologic symptoms such as hearing loss, tinnitus, otalgia, otorrhea or vertigo. Les takes Altace and insulin.

Examination:

Ears/Otoneurologic: Normal
Nasal Cavity: Normal
Oral Cavity/Oropharynx: Normal
Neck and Face: Significant bilateral TMJ crepitus was felt.
Flexible Nasopharyngoscopy: Not done

Audiogram:

A low frequency left sensorineural hearing loss with a high frequency loss was seen. The right side demonstrated mild hearing loss

Assessment and Plan:

1. Temporomandibular joint dysfunction
2. Assymetrical hearing loss

I believe Les' otalgia is related to significant TMJ dysfunction for which I recommended he obtain an oral splint. However, he also has a previously undetected assymetrical hearing loss. Thus, I have ordered an MRI of the cerebellopontine angles and I will follow up afterwards.

Thank you for involving me in this patient's care.

Best regards,

Alfred Oh, MD, FRCS (C)

**C.T. SCAN OF ABDOMEN
WITH AND WITHOUT CONTRAST
30 NOVEMBER 2004**

There is a large mass replacing the body and tail of the pancreas, measuring 13.0 x 13.0 x 11.0 cm in size. It is a solid mass with a lobulated contour and inhomogeneous internal attenuation with occasional central calcification. The splenic vein is not visible and possibly encased by the tumor since there are prominent collateral veins outside of the tumor leading to the splenic hilum. The portal vein and the portal splenic confluence is displaced to the right.

The tumor appears relatively well margined from the surrounding structures except where it blends with the remnant of the pancreatic head. The upper aspect of the tumor surrounds the splenic artery as it emerges from the celiac axis. I see no evidence of regional lymphadenopathy. The liver looks clear of metastases.

The rest of the abdomen is unremarkable. A tiny simple cyst is noted at the left kidney.

IMPRESSION:

Huge pancreatic tumor. This appears confined to the pancreas with encasement of the splenic vein and development of collateral venous channels. There is no evidence of regional lymphadenopathy or distal metastasis.

CHART NO.: H0634358
BIRTH DATE: 1976-12-12

DICTATED BY: Dr. Blair Egordie

CC: Dr. Pierre Eugler

RECORD OF OPERATION

DATE OF ADMISSION: 21/06/06
DATE OF OPERATION: 21/06/06
ROOM: 4AMU

ASSISTANT: Dr. Knackstedt
ANESTHETIST: Dr. Klymko
ANESTHESIA: General

PREOP DIAGNOSIS: Prostate cancer.
POSTOP DIAGNOSIS: Prostate cancer.
OPERATION: RADICAL PROSTATECTOMY.

OPERATIVE NOTE:

Under general anaesthesia, the patient was prepped and draped in the usual fashion. A catheter was inserted in the bladder and connected up to straight drainage. A midline incision was made from the suprapubic area to the infraumbilical area and carried down to the skin and subcutaneous tissue. The rectus fascia was divided in the midline and the space of Retzius was developed. The self retaining Bookwalter retractor was put in place and a lymph node dissection was carried out of both the right and left obturator areas. The entire specimen was sent to Pathology for evaluation. Care was taken not to injure the obturator nerves and both nerves were intact at the end of the procedure. The Bookwalter was repositioned for a midline approach and the endopelvic fascia was cleared off of all of its adipose tissue. The endopelvic fascia was divided in both the right and left and then the dorsal venous complex was bunched using a Babcock clamp and suture ligated in a figure of eight fashion with a few stitches of #1 Vicryl. One stitch was used proximally to prevent back bleeding. The dorsal venous complex was then divided with Metzenbaum scissors and the urethra was identified. The urethra was opened on its anterior surface and three stitches of 2-0 Monocryl were placed through the anterior aspect of the urethra for the future anastomosis. The catheter was delivered, clamped, cut and the posterior urethra was divided with a #15 blade. Denonvillier's space was developed and the lateral pedicles were taken down by cross clamping, clipping and cutting. The bladder neck was opened, the ureteral orifices were visualized and ureteral catheters were placed up over guide wires to protect the ureters. The bladder neck was then dissected off using electrocautery and the seminal vesicles were dissected free down to the tips and were clamped, cut and the entire specimen was removed and sent to Pathology for evaluation. The stump of the seminal vesicles were suture ligated with #1 Vicryl stitch. Bleeding was controlled and the mucosa of the bladder was everted using interrupted sutures of 4-0 Monocryl. The bladder neck was closed using a running locked stitch of 2-0 Monocryl until it was 22 French in size and then the ureteral catheters removed. The #22 two-way catheter was inserted down the urethra and three

Patient Name: ALLEN, WELLESLEY -LESLIE- Hospital No.: H0634358 (Continued)

Specimen Number: SP06:4012

(Continued)

~~PROSTATE CANCER~~

Neoplasia, High Grade;

Present bilateral.

Resection Margins:

Tumour extends focally to the inked and cauterized margin within the right and left apex and to the anterior margin within the most inferior section of the prostate. Other resection margins including bladder resection margin (base) are negative for malignancy.

Seminal Vesicles:

Not involved by tumour.

Regional Lymph Nodes:

Negative for metastatic malignancy (see specimens #'s 1 and 2).

Non-neoplastic Prostate:

HPIM.

Comment:

Tumour predominantly forms small infiltrative glands in keeping with a Gleason grade 3. In areas, there is a fusion of glands and cord formation in keeping with Gleason grade 4.

Pathological Staging:

pT2c, bilateral disease.
